Your Eyesight **PRICELESS**

LET US PROTECT YOUR SIGHT

The Saskatchewan
Association of Optometrists
Occupational Vision Care Program

An optometrist knows your eyes inside & out.

Occupational Vision Care & Eye Protection Program

We have Quality Safety Eyewear for *every* employee in *every* Industry.

The Occupational Vision Care (OVC) Program sets the industry standard for Prescription Safety Eyewear through quality, selection and service. We are the vision care and eye health experts of Saskatchewan and we ensure you have the protection your need.

The OVC program offers complete flexibility and convenience for nearly 130 client companies located throughout the province. Every year, approximately 125 optometrists provide safety eyewear to thousands of employees through our program.

We have the widest selection of Prescription Safety frames, lenses, coatings and side shields in Saskatchewan. We are able to meet the eyewear needs of your industry.

LET US PROTECT YOUR SIGHT

What the OVC offers:

CSA & ANSI Approved Products

All safety lenses and frames (prescription and non-prescription), lenses, coatings, plastic, metal or titanium frames and side shields dispensed by the Saskatchewan optometric offices meet or exceed Canadian safety standard Z94.3-07. Regular (dress) eyewear does not meet these standards—approved safety eyewear is a **must** for those working in industrial settings.

Cost Effectiveness

Once adopting a safety vision program, companies realize the immediate cost savings. Our material pricing is among the most competitive in the ophthalmic industry because we triennially tender the OVC lab contracts. In addition, your company can choose the price points for frame and lens coverage that will meet your needs—the OVC program offers complete flexibility.

OVC...Clearly the best in safety eye care

A Wealth of Experience

The OVC Program, designed by optometrists, has been around for a quarter-century. Optometrists are experts in the specialized needs of employee's occupational vision and eye health, and the Occupational Vision Care Program well understands the diversity of modern industry.

Ease of Administration

The SAO office handles all billing from one central location. Whatever your company benefit program, the OVC Program can be tailored for your specific requirements.

How Does this Work?

Your company simply releases the OVC provided authorization form to your employee, and the employee visits the optometrist of their choice: all dispensing optometrists have the fitting criteria specific to your company and can assist your employee in selecting contract-compliant eyewear, custom fit and expertly designed for their individual needs!
